# Sutezolid – better and safer than Linezolid?

PanACEA

- Sutezolid – an oxazolidinone drug candidate developed by Sequella and Global TB Alliance
- Previously evaluated up to phase 2A (14d monotherapy)
- Less mitochondrial toxicity predicted
- 7 sutezolid-treated subjects (14%) experienced mild or moderate increases in alanine transaminase (grade 1-2; Wallis, 2014)

## MPS IC50:

- sutezolid  $15.5 \mu\text{g/ml}$
- major metabolite  $4.4 \mu\text{g/ml}$
- minor metabolite  $6.7 \mu\text{g/ml}$
- Linezolid  $5.5 \mu\text{g/ml}$

Metabolism: CYP3A4, flavine monooxygenases

Wallis RS, Antimicrob Agents Chemother. 2011 Feb;55(2):567-74.

# SUDOCU – sutezolid dose-finding and combination development

EDCTP

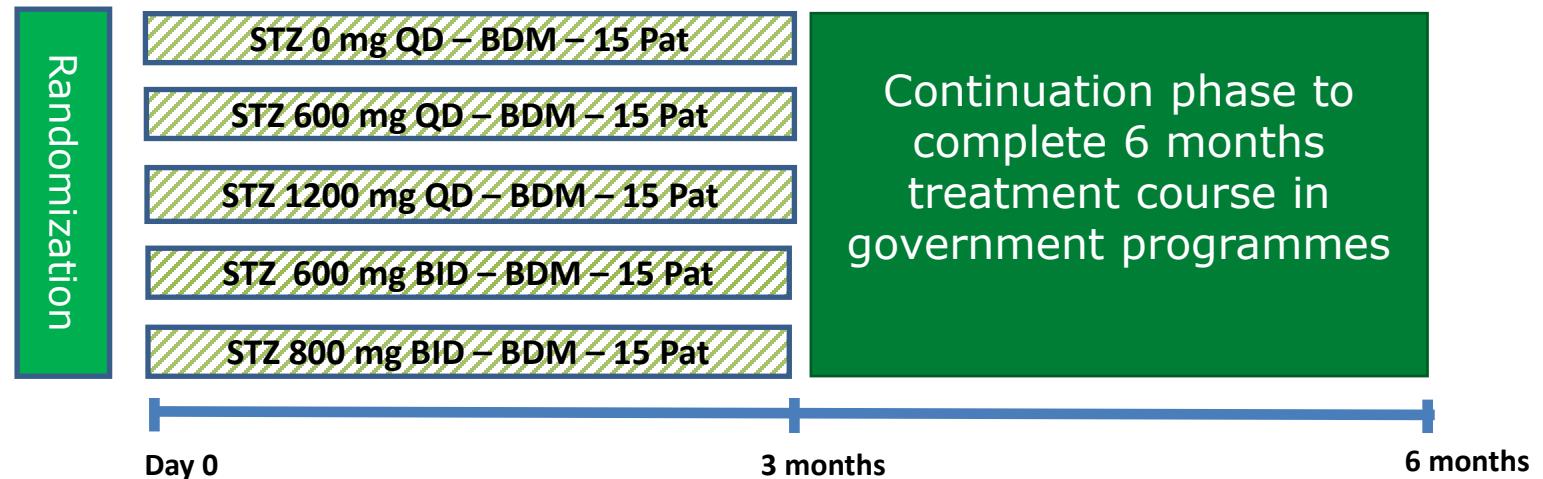

This project is part of the EDCTP2 programme  
supported by the European Union

## Objectives:

- Exposure – response modelling
- Exposure - toxicity modelling
- Select sutezolid dose with good safety and efficacy
- Assess CYP 3A4 enzyme induction potential

## Primary Endpoint:

- Change in bacterial load as measured by MGIT TTP, over 12 weeks

STZ – sutezolid. BDM – bedaquiline, delamanid, moxifloxacin at standard doses.

# The PanACEA consortium – SUDOCU Partners

# Primary efficacy Endpoint: Median TTP (ITT population)

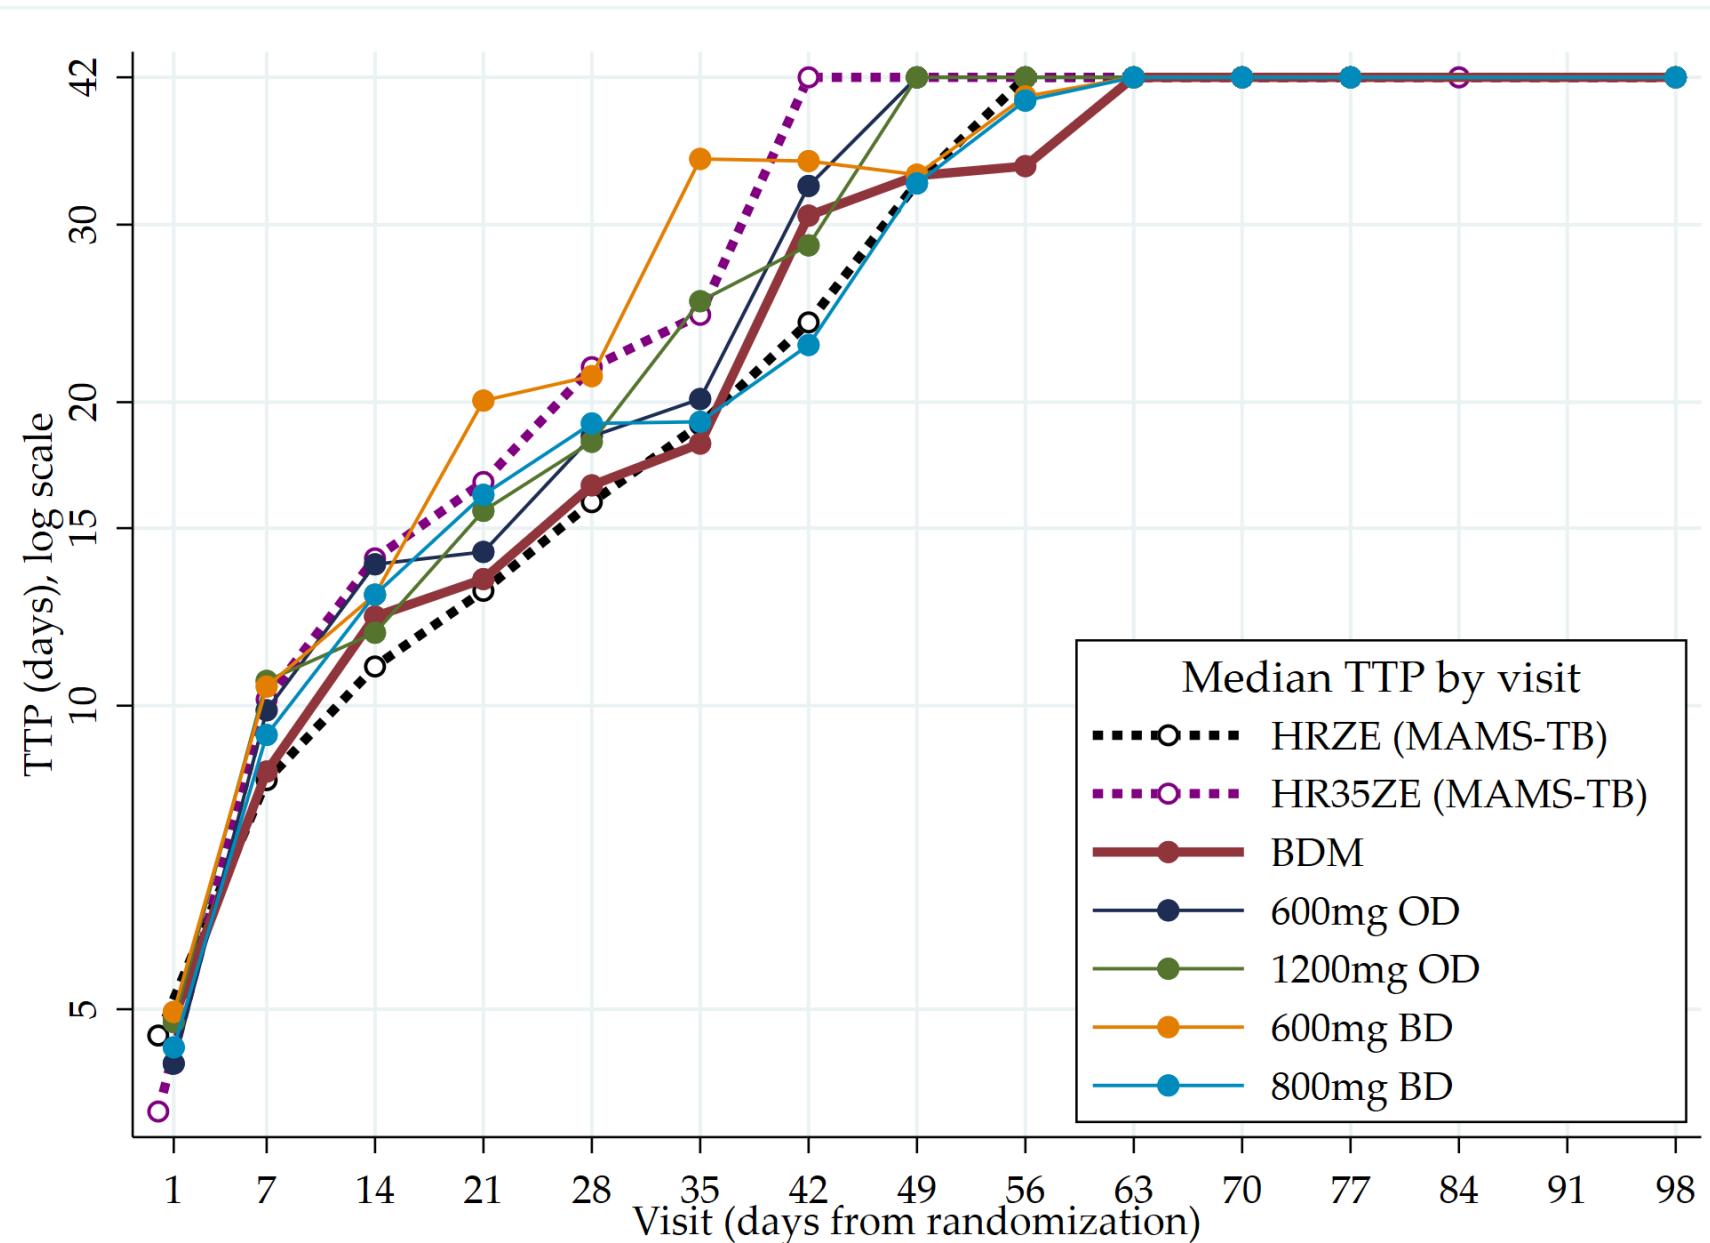

PanACEA

# Primary efficacy Endpoint: Median TTP (ITT population)

PanACEA

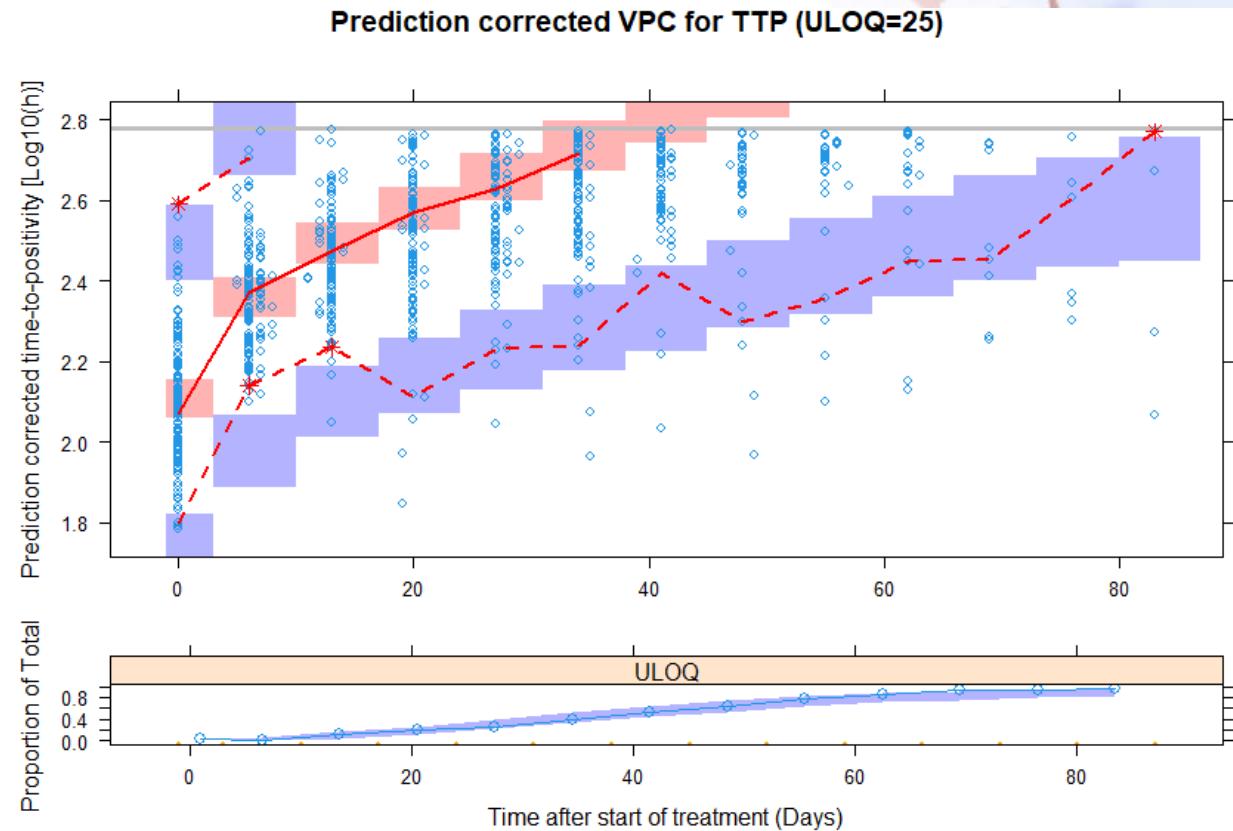

!!MAMS trial: historical comparison from similar sites, similar patient population!!

# Exposure-response modelling - methods

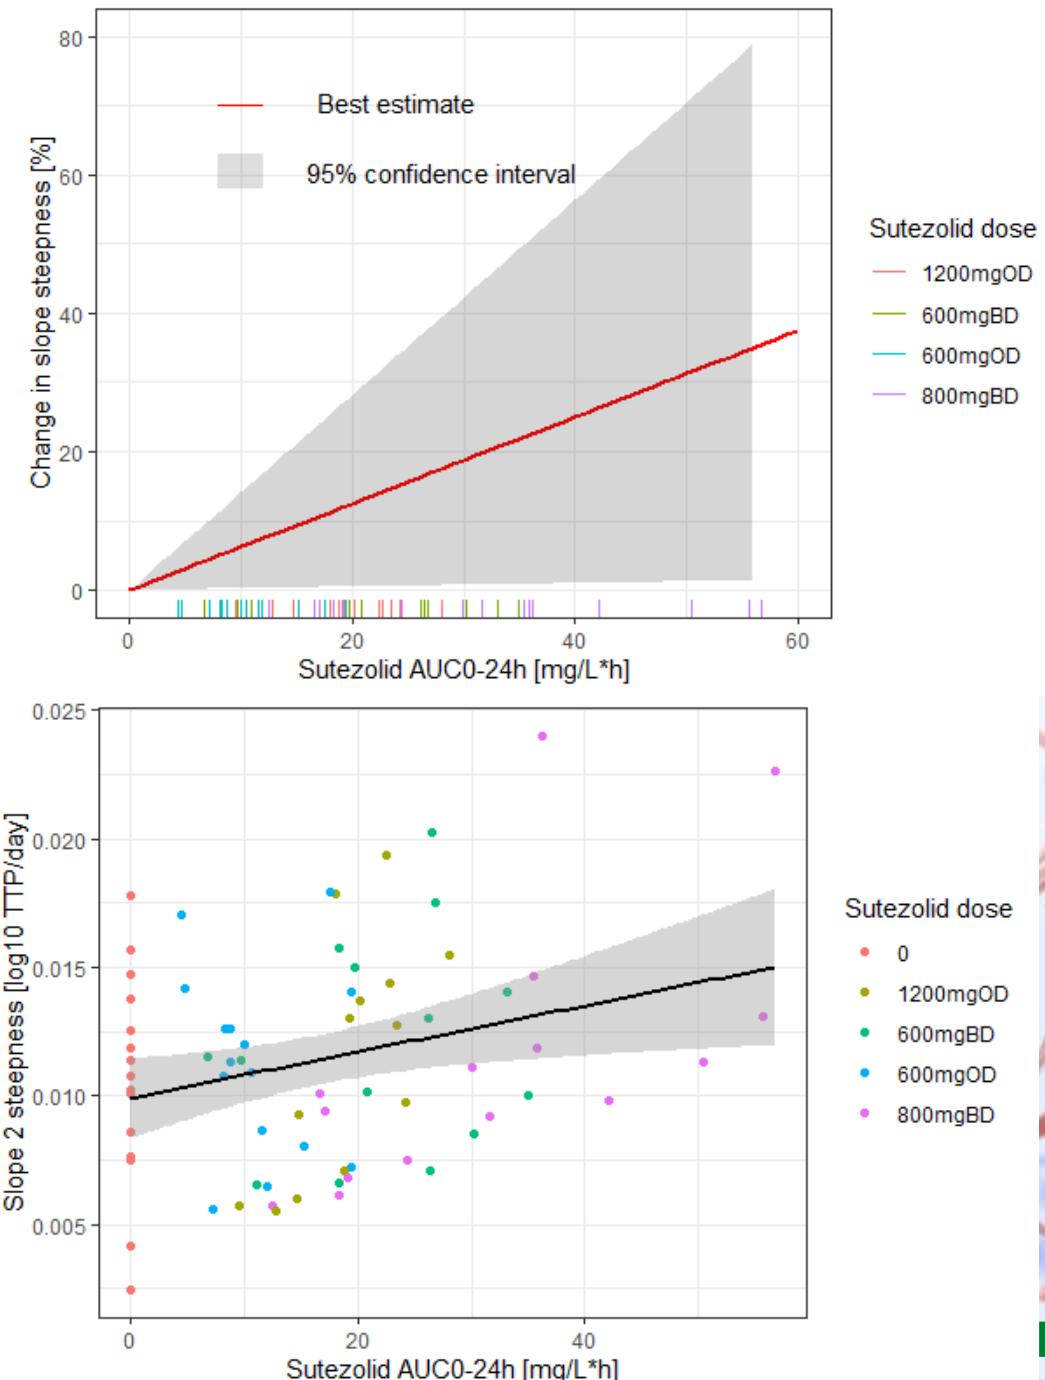

- Mixed-effects methodology
- TTP continuous variable censored at **25** or 42 days
- Bi-linear model with estimated node point at ~8 weeks
- Negative values included with model for probability of being above censoring limit

## Exposure-response modelling

- Baseline bacterial load correlated with first slope ( $p = 0.008$ )
- Ralph-score quantifying lung damage correlated with second slope ( $p < 0.001$ )
- Sutezolid AUC<sub>0-24h</sub> correlated with both slopes ( $p=0.04$ )
- Approx 40% steeper slope for highest observed AUCs

## Summary

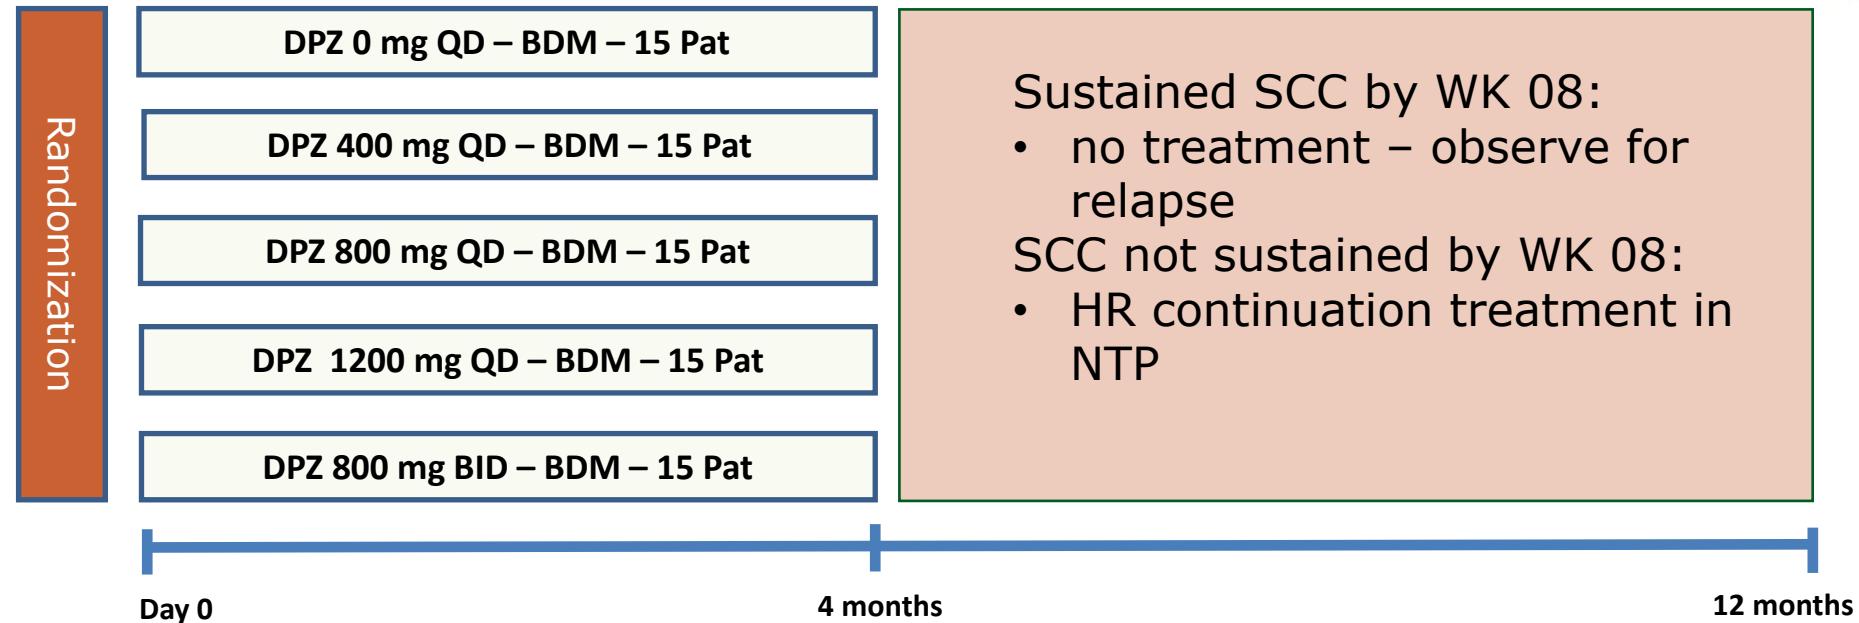

### Safety:

- Good safety of the combination +/- sutezolid
- 4 SAEs QTcF prolongation: due to 60ms cutoff; no measurements beyond 470 ms
- 1 case of grade 4 liver toxicity, 1 case of neutropenia

### Efficacy:

- BDM backbone similar to HRZE in historical comparison;
- PK-PD: 40% steeper slope for highest observed sutezolid exposures
- Sutezolid added efficacy to BDM
- No plateau in exposure or efficacy seen in SUDOCU

# Outlook: DECODE

DPZ - delpazolid. BDM – bedaquiline, delamanid, moxifloxacin at standard doses. SCC: sputum culture conversion.

## Objectives:

- Exposure – response modelling
- Exposure - toxicity modelling
- Select delpazolid dose with good safety and efficacy

- LPI Sep 2022
- Soft Database Lock imminent
